JATIN KUMAR

Junior Analytics Engineer | Data Analyst

Palwal, Haryana, India | +91 90533 02020 | jating1416@gmail.com

Portfolio | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Entry-level Analytics Engineer and Data Analyst with a 9-project portfolio and hands-on experience in Microsoft Fabric, T-SQL, dimensional modelling, Git/GitHub, Power BI and Python. Built an end-to-end Fabric medallion solution spanning OneLake, Lakehouse, Bronze-Silver-Gold transformations, Warehouse, star-schema modelling and KPI validation. Uses PySpark at a basic level for DataFrame transformations and Spark SQL. Also trained in Snowflake fundamentals and hands-on warehouse workflows, with a strong focus on data quality, reconciliation and business-ready analytical models.

TECHNICAL SKILLS

Microsoft Fabric: OneLake, Lakehouse, Fabric Warehouse, Data Pipelines, Dataflow Gen2, notebooks, Delta tables, medallion architecture
SQL & Modelling: T-SQL, MySQL, joins, CTEs, window functions, CTAS, views, data validation; dimensional modelling, grain, fact/dimension tables, star schema, surrogate-key concepts
Python & Spark: Python, Pandas, NumPy, Jupyter Notebook; PySpark basics—DataFrames, filtering, column transformations, aggregations and Spark SQL
BI & Analytics: Power BI, DAX measures, CALCULATE/filter context, time intelligence, semantic models, KPI definition, EDA and business reporting
Snowflake: Architecture, virtual warehouses, databases and schemas, stages, file loading, COPY INTO, Snowpipe, caching, Time Travel, zero-copy cloning, streams/tasks, RBAC and data masking
Engineering Practices: Git, GitHub, branches, pull requests, merge-conflict basics, README documentation, ETL/ELT, data-quality checks and reconciliation
Currently Learning: Databricks fundamentals and dbt Core with hands-on SQL transformation workflows

SELECTED ANALYTICS ENGINEERING & ANALYTICS PROJECTS

Microsoft Fabric Sales Analytics — End-to-End Medallion Architecture

Microsoft Fabric • T-SQL • Basic PySpark • Delta Lake • Dimensional Modelling • Power BI

- Built an end-to-end analytics flow from raw CSV ingestion through OneLake and Fabric Lakehouse Bronze, Silver and Gold layers to a Fabric Warehouse and Power BI semantic model.
- Used Data Pipeline/Dataflow Gen2 and Fabric notebooks for ingestion and transformation; applied basic PySpark and Spark SQL for typing, standardisation, deduplication and analytical table creation.
- Audited 1,525 source rows, identified and removed 20 duplicate order records, and delivered 1,505 validated orders with row-count and KPI reconciliation.
- Designed a star schema with fact_sales and customer, product, region and date dimensions; validated revenue, order count and reporting totals against transformed data.

Supply Chain & Logistics Delivery Performance

Python • Power BI • DAX • Data Modelling

- Analysed 200,000 order shipments across customer, product, warehouse and carrier data to evaluate fulfilment, delivery SLAs, shipping cost and profitability.
- Built KPIs for Rs.3.95Bn revenue, Rs.518.09M net profit, 13.13% net margin, 86.19% on-time delivery and a 4-day average delivery cycle.
- Found Air Freight as the costliest mode at Rs.266.99 average cost per order—about 80% above Road Freight—and recommended freight-mode and carrier-SLA optimisation.

Indian Financial Fraud Analytics

Python • SQL/MySQL • Power BI • DAX

- Analysed 250,000 synthetic transactions linked to customer, card and merchant data to investigate payment, location and merchant-risk patterns.
- Built monitoring KPIs including a 5.4% fraud rate and 91% transaction success rate; segmented exposure by state, payment channel, card status and merchant category.
- Highlighted expired-card transactions, late-night activity and high-exposure categories to support focused risk monitoring.

ADDITIONAL SELECTED PROJECTS

E-Commerce Sales Analysis

MySQL • Power BI • DAX • Advanced Excel

- Used SQL window functions for category and regional ranking and delivered Sales, Profit, Orders, Margin and Average Order Value KPIs.
- Identified Home Decor as the leading sales/profit category and the South as the lowest-sales region, supporting targeted promotional recommendations.

HR Analytics

Python/Pandas • MySQL • Power BI

- Analysed 4,410 employees, including 3,699 active employees, and measured 16.12% attrition across department, age, performance and satisfaction views.
- Identified R&D; as the largest workforce and highest-average-salary function and the 26–35 group as the largest workforce segment.

EDUCATION

MBA in Operations Management (Online) — Vivekananda Global University | Jan 2026 – Present
Bachelor of Computer Applications (BCA) — Sikkim Alpine University | 2022 – 2025
Diploma in Pharmacy (D.Pharm) — Apeejay Stya University | 2020 – 2022

CERTIFICATION

Complete Data Analyst Bootcamp – From Basics to Advanced
KRISHAI Technologies via Udemy • 89 hours • Completed Jul 2026
Credential ID: UC-0424329d-4d67-4fb8-b596-33cc47844312 • https://ude.my/UC-0424329d-4d67-4fb8-b596-33cc47844312

ADDITIONAL INFORMATION

Languages: English and Hindi • Open to Delhi, Gurugram, Delhi NCR, relocation and remote roles • Available for full-time work; MBA is online
